Profile

I am an electronic engineer focused on embedded systems. My experience includes working in small teams and large multinational corporations in different areas - space, aircraft, IoT, industrial automation, semiconductors.

I have strong knowledge of C, C++, and Python and a good understanding of electronics from bits to complex electronic systems.

My experience allows me to develop an effective software architecture and support my team in the development process.

Skills

Portfolio online: agramakov.me/portfolio
(code examples, open source projects, etc.)

Programming languages	C , C++ , Python , PowerShell
Processor architectures	ARM (STM32 series), AVR8 (ATTiny/ATMega series), GreenArray F18 (GA144), RISC-V , SPARCv8 (LEON3), Xtensa (ESP32 series)
Communication protocols	ARINC 429 , CAN , CIP , I2C , RS-232 , RS-422 , RS-485 , OPC UA , SPI , USB
Tools and technologies	GDB , Microsoft DAP , OpenOCD , C++ STL , FreeRTOS , OpenCV , CI/CD , Docker , Git , SVN , Bash , PowerShell , Agile , GitLab , GitHub , Jira , Redmine , SCRUM , SOLID
PCB and schematic software	Altium Designer , EAGLE CAD , Proteus , MultiSim , KiCAD
CAD software	Autodesk Inventor , Autodesk AutoCAD , Fusion 360 , SolidWorks
Mathematical modeling	MathCAD , MATLAB , Octave , SciPy
Databases	MS Access , SQL

Languages

- English Professional working proficiency (B2)
- Russian Native proficiency (C2)
- Czech Elementary proficiency (A2)

Employment History

Senior Embedded Software Engineer

2N TELEKOMUNIKACE, an **Axis Company** - Prague, Czech Republic

May 2023 - Now

~ 1 year

Firmware development for NFC card readers, fingerprint sensors, and other access control devices. Integration of the devices with the main unit Linux software. Typical tasks:

- Firmware development
- Extensive debugging
- Code review
- Providing help and support to teammates

Achievements

- Software architecture development** for a new version of a card reader.
- Establishing the Unit Testing environment** and integrating it in the operational process.
- >10 new features** delivered

I also caused a significant positive impact on the team culture and work process:

- Revised polished and crystalized the team development workflow** according to the AGILE principles.
- Established an effective information exchange I the team** through a documentation system, established a team book library.*
- Actively participating in the **integration of AI technologies in the company development practices**

Technology Stack

C , C++ , Python , Git , ARM , STM32 , NFC , RFID , QSDP , Jira , SCRUM

Senior Embedded Software Engineer

[Rockwell Automation](#) - Prague, Czech Republic

February 2021 - April 2023

2 years 3 months

Activity

Development of firmware for industrial automation computers. In detail:

Typical tasks:

- Development of MISRA-compatible firmware code according to the High-Level documentation
- Unit tests development
- Code review
- Providing help and support to teammates

Achievements

- **Development features by design requirements** (about **80 closed stories**):
 - *Sequence Manager* - an entity for organizing complex technological processes into easily manageable sequences and subsequently, provide step-by-step implementations for each sequence.
 - Implementation of a new OSAL for a future device
 - Writing unit tests
- **Fixing bugs** (about **50 fixed and closed exceptions**)
- **Code Reviewing** (more than **100 reviews as the main reviewer**)

Besides software development, I have actively engaged in fostering a positive team culture and driving organizational improvements within the company. Some of the key initiatives I have undertaken include:

- **Revamping the New Employee Onboarding Process:** I played a main role in revitalizing the onboarding process for new employees, ensuring a smooth transition for developers worldwide.
- **Creating a Learning-Supportive Environment:** Collaborating with the team lead, I established an environment that promotes continuous learning within the team. This involved organizing regular team-wide learning sessions and allocating dedicated time for individual learning endeavors. I personally led five learning sessions to facilitate knowledge sharing and growth.
- **Enhancing Team Communication and Collaboration:** To foster effective communication and collaboration, I introduced a series of meetings for reviewing team rules, synchronizing efforts at the start of each sprint, and ensuring alignment midway through.
- **Developing an Extensive Team Documentation Space:** Recognizing the importance of easy access to information, I spearheaded the development of a comprehensive team documentation repository. This resource ensures that team members have quick and convenient access to critical information, enabling smoother project execution and knowledge sharing.

Technology Stack

C . C++ . Python , Git , ARM , ABOS , OPC UA , PLC , MISRA , Logix Designer , Common Industrial Protocol (CIP) , GitLab , SAFE , SCRUM

Embedded Software Engineer

[Espressif Systems](#) - Brno, Czech Republic

January 2019 - December 2020

2 years

Activity: Development of tools and drivers for ESP-based processors. Involved in the development of debugging tools like OpenOCD and GDB. Implementing and developing of debug module based on the DAP protocol; Implementing and developing a USB driver for ESP32-S2 chip based on TinyUSB stack.

Tasks:

- Debugging tools development (Debug adapter for ESP-IDF VSCode Extension, OpenOCD)
- Middleware driver development (ESP-IDF framework)
- Unit tests development
- Preparing trainings for colleagues

Technology Stack

C . C++ . Python . Git . ESP-IDF . USB . VSCode Extensions ; Powershell , CI , Docker , GitHub , FreeRTOS , TinyUSB , Xtensa , Raspberry Pi , Microsoft DAP , OpenOCD

Embedded Systems Programmer

[Scientific Production Enterprise Digital Solutions](#) - Moscow, Russia

January 2018 - September 2018

9 months

Activity: I worked with SPARC and RISC-V-based processors projects, and with Sputnik processor (ARM architecture). I developed libraries for interactions with processors and peripherals; I developed tests and testing software for developed processors, their peripherals and memory; debugged code with HDL models, FPGA, and prototype layouts. All developed ICs are for spacecraft purposes.

Typical tasks:

- Processor design verification
- Low-level driver development
- Unit-tests development
- Development of debugging tools

Technology Stack

C . C++ . Python . SVN , GIT , Cadence , SPARC V8 , RISC-V , ARM , AMBA , I2C , SPI , RS-232 , RS-422 , RS-485 , SpaceWire , CAN , RTOS , FreeRTOS

Chief Specialist of Flight Test Instrumentation Department

[Sukhoi Civil Aircraft](#) - Moscow, Russia

June 2017 - December 2017

7 months

Activity: I worked with Sukhoi Superjet 100 aircraft. My main duty was preparing the Measuring Onboard Systems for qualification trials. I programmed aircraft systems according to the sensor set, developed SQL databases, wrote Python programs for information processing, and worked with measure sensors and tools.

Tasks:

- Preparing hardware and software for coming trials

- Modeling trials and troubleshooting on aviation simulator
- Development of UI for trials
- Sensor nomenclature accounting
- Sensor database development

Technology Stack

C# , XAML , Visual Studio , MS Access , Python , MySQL , Entity relationship diagram (ERD) , Acra KAM-500 , ARINC 429 , AFDX , Thermal Sensors

Electronics Engineer

[Bauman Moscow State Technical University](#) - Moscow, Russia

September 2015 - July 2018

3 years 11 months

Activity: *My main area was in space data processing and recognition of the space satellites data. In parallel with work projects, I was doing image recognition research.*

Tasks:

- Research and development in space imagery (image recognition)
- Development of experiments and experimental stands in support of current research

Technology Stack

Python , SciPy , OpenCV , Visual Studio , Eclipse , Octave , MATLAB , Autodesk Inventor , CCD devices , IR- , Vis- , UF-imagery devices , Raspberry Pi , ARM , STM32 , CANbus , SPI , I2C , RS-232

Electronics Engineer

[Research Institute of Radio-electronic Technologies \(BMSTU\)](#) - Moscow, Russia

August 2012 - September 2015

3 years 2 months

Activity: *My work in the Research Institute was in the field of optoelectronic imagery systems for spacecraft and providing research in space satellite imagery systems.*

Tasks:

- Preparing on-ground demonstration of the satellite's (Chibis-M) system with our modification
- Research and development in space imagery (image recognition)
- Teaching Electronic Components Course for Bauman students

Technology Stack

C , C++ , Python , ColorForth , MATLAB , Visual Studio , AtmelStudio , Autodesk Inventor , Arduino , AVR , CANbus , CCD devices , CANbus

Education

Master's degree / Specialist degree

[Bauman Moscow State Technical University](#)

September 2007 - July 2013

6 years

- **Major:** Radio-Electronic Systems and Devices
- **Minor:** Laser Location and Communication Systems
- **Thesis:** "Development of Microsatellite's Onboard Hardware Complex"

Ph.D., not completed

[Bauman Moscow State Technical University](#)

September 2013 - November 2017

4 years

- **Thesis:** "Unified Radio- and Optoelectronic Remote Sensing"

Personal characteristics

proactive , collaborative , positive , enthusiastic , consistent

Hobbies

robotics , wood crafting , fine arts , literature
