## **Profile**

I am an electronics engineer focused on embedded systems. My experience includes working in small teams and large multinational corporations in different areas - space, aircraft, IoT, industrial automation, semiconductors.

I have strong knowledge of C, C++, and Python and a good understanding of electronics from bits to complex electronic systems.

My experience allows me to develop an effective software architecture and support my team in the development process.

## **Skills**

```
Portfolio online: <u>agramakov.me/portfolio</u> (code examples, open source projects, etc.)
```

```
Programming languages

Processor ARM (STM32 series), AVR8 (ATTiny/ATMega series), GreenArray F18 (GA144), RISC-V, space architectures

Communication protocols

Tools and technologies

PCB and schematic software

CAD software

Mathcad, Matlab, Octave, SciPy

MS Access, SOL
```

# Languages

- English Professional working proficiency (B2)
- Russian Native proficiency (C2)
- Czech Elementary proficiency (A2)

## **Education**

## Master's degree / Specialist degree

**Bauman Moscow State Technical University** (2007-2013)

- Major: Radio-Electronic Systems and Devices
- Minor: Laser Location and Communication Systems
- Thesis: "Development of Microsatellite's Onboard Hardware Complex"

## Ph.D., not completed

Bauman Moscow State Technical University (2013-2017)

■ Thesis: "Unified Radio- and Optoelectronic Remote Sensing"

## **Employment History**

## **Senior Embedded Software Engineer**

2N TELEKOMUNIKACE, an Axis Company - Prague, Czech Republic

May 2023 - Now

\*~ 1 year\*

Firmware development for NFC card readers, fingerprint sensors, and other access control devices. Integration of the devices with the main unit Linux software. Typical tasks:

- Firmware development
- Extensive debugging
- Code review
- Providing help and support to teammates

### **Achievements**

- Software architecture development for a new version of a card reader.
- Establishing a Unit Testing environment and integrating it in the operational process.
- >10 new features delivered

I also caused a significant positive impact on the team culture and work process:

- Revised polished and crystalized the team development workflow according to the AGILE principles.
- Established an effective information exchange in the team through a team internal documentation, established a team book library.
- Actively participating in the integration of AI technologies in the company development practices

#### **Technology Stack**

C, C++, Python, Git, ARM, STM32, NFC, RFID, OSDP, Jira, SCRUM

## **Senior Embedded Software Engineer**

Rockwell Automation - Prague, Czech Republic February 2021 - April 2023 2 years 3 months

#### Activity

Development of firmware for industrial automation computers. In detail:

Typical tasks:

- Development of MISRA-compatible firmware code according to the High-Level documentation
- Unit tests development
- Code review
- Providing help and support to teammates

### **Achievements**

- Development features by design requirements (about 80 closed stories):
  - Sequence Manager an entity for organizing complex technological processes into easily manageable sequences and subsequently, provide step-by-step implementations for each sequence.
  - Implementation of a new OSAL for a future device
  - Writing unit tests
- Fixing bugs (about 50 fixed and closed exceptions)
- Code Reviewing (more than 100 reviews as the main reviewer)

Besides software development, I have actively engaged in fostering a positive team culture and driving organizational improvements within the company. Some of the key initiatives I have undertaken include:

- Revamping the New Employee Onboarding Process: I played a main role in revitalizing the onboarding process for new employees, ensuring a smooth transition for developers worldwide.
- Creating a Learning-Supportive Environment: Collaborating with the team lead, I established an environment that promotes continuous learning within the team. This involved organizing regular team-wide learning sessions and allocating dedicated time for individual learning endeavors. I personally led five learning sessions to facilitate knowledge sharing and growth.
- Enhancing Team Communication and Collaboration: To foster effective communication and collaboration, I introduced a series of meetings for reviewing team rules, synchronizing efforts at the start of each sprint, and ensuring alignment midway through.
- Developing an Extensive Team Documentation Space: Recognizing the importance of easy access to information, I spearheaded the development of a comprehensive team documentation repository. This resource ensures that team members have quick and convenient access to critical information, enabling smoother project execution and knowledge sharing.

### **Technology Stack**

C, C++, Python, Git, ARM, ABOS, OPC UA, PLC, MISRA, Logix Designer, Common Industrial Protocol (CIP), GitLab, SAFe, SCRUM

## **Embedded Software Engineer**

Espressif Systems - Brno, Czech Republic

January 2019 - December 2020 2 years

Activity: Development of tools and drivers for ESP-based processors. Involved in the development of debugging tools like OpenOCD and GDB. Implementing and developing of debug module based on the DAP protocol; Implementing and developing a USB driver for ESP32-S2 chip based on TinyUSB stack.

Tasks:

■ Debugging tools development (Debug adapter for ESP-IDF VSCode Extension, OpenOCD)

- Middleware driver development (ESP-IDF framework)
- Unit tests development
- Preparing trainings for colleagues

#### **Technology Stack**

C, C++, Python, Git, ESP-IDF, USB, VSCode Extensions; Powershell, CI, Docker, GitHub, FreeRTOS, TinyUSB, Xtensa, Raspberry Pi, Microsoft DAP, OpenOCD

## **Embedded Systems Programmer**

Scientific Production Enterprise Digital Solutions - Moscow, Russia

January 2018 - September 2018

9 months

Activity: I worked with SPARC and RISC-V-based processors projects, and with Sputnik processor (ARM architecture). I developed libraries for interactions with processors and peripherals; I developed tests and testing software for developed processors, their peripherals and memory; debugged code with HDL models, FPGA, and prototype layouts. All developed ICs are for spacecraft purposes.

Typical tasks:

- Processor design verification
- Low-level driver development
- Unit-tests development
- Development of debugging tools

#### **Technology Stack**

C, C++, Python, SVN, GIT, Cadence, SPARC V8, RISC-V, ARM, AMBA, I2C, SPI, RS-232, RS-422, RS-485, SpaceWire, CAN, RTOS, FreeRTOS

## Chief Specialist of Flight Test Instrumentation Department

Sukhoi Civil Aircraft - Moscow, Russia

June 2017 - December 2017

7 months

Activity: I worked with Sukhoi Superjet 100 aircraft. My main duty was preparing the Measuring Onboard Systems for qualification trials. I programmed aircraft systems according to the sensor set, developed SQL databases, wrote Python programs for information processing, and worked with measure sensors and tools.

#### Tasks

- Preparing hardware and software for coming trials
- Modeling trials and troubleshooting on aviation simulator
- Development of UI for trials
- Sensor nomenclature accounting
- Sensor database development

### **Technology Stack**

C#, XAML, Visual Studio, MS Access, Python, MySQL, Entity relationship diagram (ERD), Acra KAM-500, ARINC 429, AFDX, Thermal Sensors

## **Electronics Engineer**

Bauman Moscow State Technical University - Moscow, Russia

September 2015 - July 2018

3 years 11 months

Activity: My main area was in space data processing and recognition of the space satellites data. In parallel with work projects, I was doing image recognition research.

### Tasks:

- Research and development in space imagery (image recognition)
- Development of experiments and experimental stands in support of current research

## **Technology Stack**

Python, SciPy, OpenCV, Visual Studio, Eclipse, Octave, MATLAB, Autodesk Inventor, CCD devices, IR-, Vis-, UF- imagery devices, Raspberry Pi, ARM, STM32, CANbus, SPI, I2C, RS-232

## **Electronics Engineer**

Research Institute of Radio-electronic Technologies (BMSTU) - Moscow, Russia

August 2012 - September 2015

3 years 2 months

Activity: My work in the Research Institute was in the field of optoelectronic imagery systems for spacecraft and providing research in space satellite imagery systems.

### Tasks:

- Preparing on-ground demonstration of the satellite's (Chibis-M) system with our modification
- Research and development in space imagery (image recognition)
- Teaching Electronic Components Course for Bauman students

## Technology Stack

C, C++, Python, ColorForth, MATLAB, Visual Studio, AtmelStudio, Autodesk Inventor, Arduino, AVR, CANbus, CCD devices, CANbus
